

Beacon remote control components and design

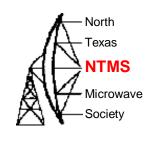

May 18, 2024

Remote commands

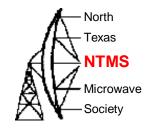

- Power is on all the time to the "listening system" which consists of Hologram network interface via cell signal/internet and the executing program waiting for commands
- BCNON this command turns on all functions of the beacon (all ON commands are executed)
- BCNOFF this command turns off all functions of the beacon (all OFF commands are executed). The listener stays on and active.
- STATUS this command will return the beacon status along with all telemetry data. If the beacon is not running (has previously processed a BCNOFF command) then the response will be: LISTEN is ON

Remote commands

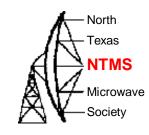

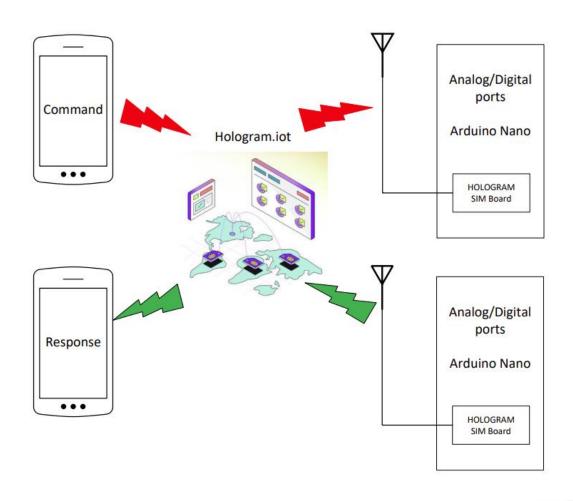

- GPSON/GPSOFF turns on/off the GPS ref
- LOON/LOOFF turns on/off the LO
- QUADON/QUADOFF turns on/off the Quadrupler
- PAON/PAOFF turns on/off the PA
- VARON/VAROFF turns on/off the variable-configurable regulatorLM317 channel (one extra source of 1-12v DC power)

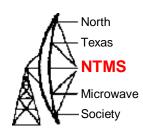

Remote commands

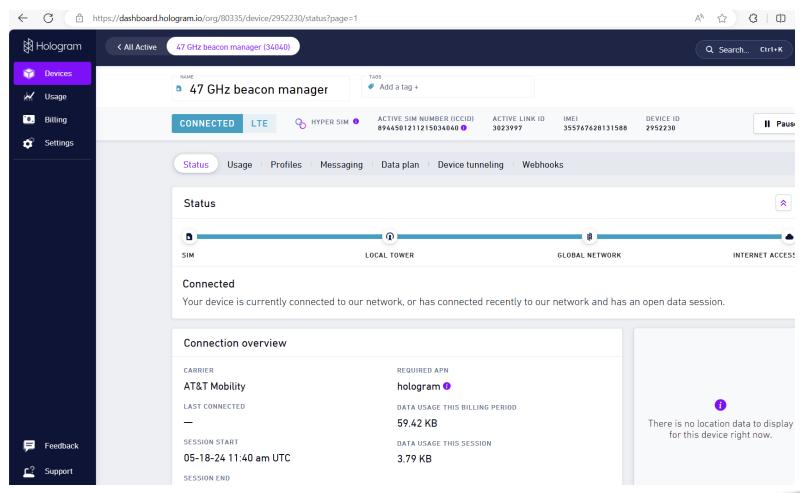

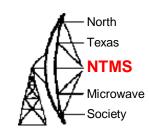

- STATUS the normal response of telemetry data when the beacon is running is (nominal values):
 - LISTEN is ON
 - PA nominal output = 5
 - QUAD temp = 30 C
 - LO lock = true
 - GPS sat lock = true
 - Ambient temp = 28 C
 - Ambient hum = 65 %
 - 5v GPS cur = 180 ma
 - 6v QUAD cur = 195 ma
 - Var Reg cur = 0 ma
 - 12v LO cur = 75 ma
 - 12v PA LO cur = 1025 ma
 - 12v mains = 12.9 v
 - Extra volts mon = nn.n v
 - Extra volts mon = nn.n v
